

## The Vista I3 – a revolution in lighting in one compact package

When our customers said they wanted a compact, portable, economical version of the Vista T series, we listened. The result is the Jands Vista I3.

Including an Intel Core 2 Duo Processor®, the I3 puts all the revolutionary features of the Vista T series into a desk you can fit under your arm. Simply connect a monitor, keyboard and mouse and you've got a fully-operational and highly-portable Vista console for way less than the price of the full-scale console.

**I3 – leave your laptop at home**

## Feature List

### Playback Controls

- 20 Playbacks, 10 with faders and flash buttons, 10 without

## Specifications

Processor	Intel Core 2 Duo 2.13GHz
System RAM	1GB
Hard Drive	160GB SATA II
Monitor Outputs	One x DVI + One x VGA, Independant
DMX Outputs	Four ANSI E1.11
USB Ports	Seven USB2.0
Dimensions (mm)	650(W) 600(D) 170(H)
Net/shipping weight	19kg/25kg

## I3 – leave your laptop at home

### Compact, powerful, cost-effective

The I3 is an incredibly compact and powerful lighting console that provides the software, the processor and the control elements of the Vista console. All you have to do is connect a screen, keyboard and mouse and you've got a fully operational Vista with exactly the same software and feature set as the full-size console.

### Secure and convenient

With the I3 there's less to carry with you to gigs and fewer connections to make when you get there. Featuring an Intel Core 2 Duo processor, the I3 gives you all the computing power you need to run dazzling shows.

The built-in processor operates using Linux and is dedicated solely to running the Vista software. This means you don't have to worry about conflicts with other software applications or hardware, or operating system updates that can change your setup unexpectedly.

### Connections, connections

You can attach two external monitors (DVI & VGA) and, if you like to work with a pen-tablet, you can plug it in as the main monitor. You can even attach a monitor arm to the side of the console.

The four DMX outputs give you plenty of connections to lights and dimmers and you can also connect Artnet or Pathport compatible devices through the Ethernet port. The I3 also features seven USB

ports so you can connect other Vista products (such as the S1 and M1) when you need extra playback or programming controls, or when you want to save or load your creations using a memory stick or external drive.

### Choose how many channels you want

While, the full-size Vista gives you up to 8192 DMX channels, for smaller shows where you don't need that sort of flexibility you'll want to keep your costs down. The I3 features a 'dongle' that determines the number of channels available: you can choose whether you want 128, 256, 1024, 2048 or unlimited channels, simply by choosing the 'dongle' that's best for you.

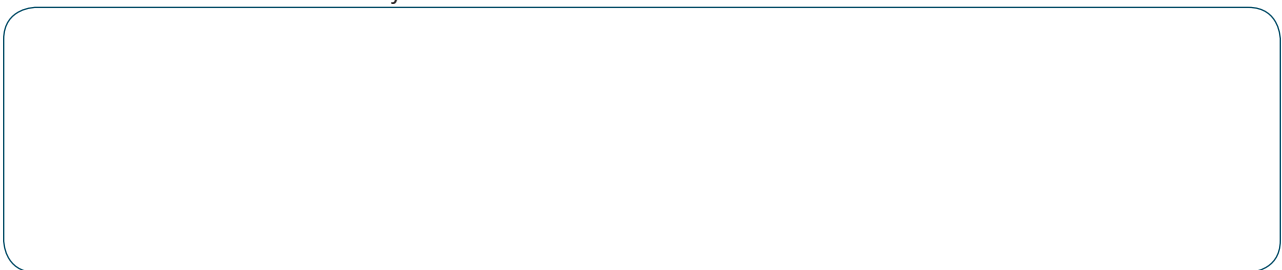

### All the live features of the Vista

The I3 gives you all the features that make the Vista such a great live desk: big, clear LCDs, fader banks you can split or combine and a set of modifier buttons. With 20 playbacks (10 with faders), four DMX outputs, timecode input and three encoder wheels, you'll have all the control you need.

Of course, the I3 also features the Vista's incredible generic fixture model, so no matter what rig you've programmed your show for, the I3 adapts automatically if you have to run the same show with a different rig, *without the need for re-programming*.
